

ADLY FATHUR ICHSANI KAMESWARA

Full-Stack Developer (Backend-Focused)

+62 812-5954-7894 | adlydevelopment37@gmail.com | Sleman, Yogyakarta | LinkedIn | GitHub

PROFILE

Full-stack developer with a strong backend focus, coming from a background in outsourcing operations management. Builds production-grade REST APIs with TypeScript, Express.js, PostgreSQL, and Prisma ORM, and the React frontends that consume them, using one language end-to-end. Strong focus on data integrity and test coverage — writes full integration test suites against real databases, backed by end-to-end coverage on the frontend. Recently built both the backend and frontend for a multi-tenant workforce management system, directly informed by hands-on experience managing outsourced field staff. Seeking Backend or Full-Stack Developer roles.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript
Backend: Node.js, Express.js, REST API design, Zod validation, Session-based auth, bcrypt
Frontend: React, Tailwind CSS, TanStack Query, React Hook Form
Database & ORM: PostgreSQL, MySQL, Prisma ORM
Testing: Jest, Supertest, Playwright (integration + E2E, against real databases/UI)
Tools: Git, GitHub, Postman, Cloudinary

PROJECTS

Workforce Management System — Full-Stack Personal Project (May 2026 – present) ([GitHub](#))

Tech Stack: TypeScript, Express.js, Prisma ORM, PostgreSQL, React, Tailwind CSS

- Designed and built a multi-tenant backend REST API handling role-based attendance, supervisor visit logging, and photo-verified checklists for field staff (security, cleaning, maintenance) across multiple client companies
- Enforced strict role-based access across three tiers (Admin, Supervisor, Staff), with staff scoped to exactly one company and division and blocked from cross-division actions
- Built shift-based attendance logic supporting midnight-crossing shifts, sequential check-in → checklist → check-out enforcement, and race-condition-safe duplicate check-in prevention at both application and database level
- Implemented checklist and admin-management rules including mandatory 1–3 photo verification per checklist item, day-locked checklist submission, and safeguards preventing deletion of companies/divisions with active staff assigned
- Wrote a full integration test suite (Jest + Supertest) covering 8 backend modules with real HTTP requests against a live PostgreSQL database — caught and fixed real bugs including an inverted conditional allowing cross-division check-ins and a broken auth cookie mismatch
- Designed and built the full React/TypeScript frontend consuming this API end-to-end — admin panel plus dedicated mobile-only STAFF/SUPERVISOR flows — shipped as an installable PWA with Playwright E2E coverage across desktop and mobile viewports

EXPERIENCE

Operational & Administrative Staff (Outsourcing Management) — PT Cokro Anugerah Putra Dec 2025 – May 2026

- Managed daily operations of outsourced personnel including security, cleaning service, and driver teams.
- Prepared operational reports and maintained administrative documentation.
- Managed employee attendance records and operational data — direct hands-on experience with the workflows later modeled in the Workforce Management System project above.
- Coordinated procurement activities and operational support requirements.

Asset and Warehouse Support Intern — PT Radiant Utama Interinsco Tbk Jun 2024 – Dec 2024

- Conducted auditing and inventory control for more than 1,000 company assets, performing verification and data validation across multiple operational sites.
- Assisted in maintaining accurate asset records and collaborated with administrative teams to improve reporting accuracy.

EDUCATION

Bachelor's Degree in Information Technology — Amikom Yogyakarta 2024

- Final Project: developed a 2D RPG game featuring quest systems and event-driven gameplay mechanics using Unity.
